

# CASE STUDY

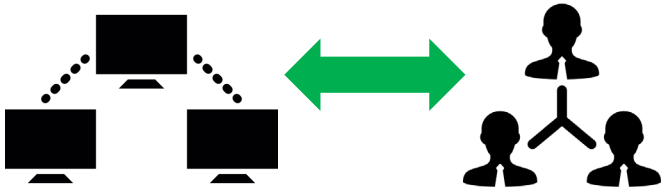

*How SecurView's ISE Deployment Assistant (IDA) accelerated the rollout of ISE and increased the access control capabilities within the network*

## Context

A healthcare system with multiple hospital sites through VA , SC, NY & MD needed to rollout access to close to 55,000 ports.

### Customer Objectives

- The healthcare system wanted to be able to enforce network access control across multiples sites.
- Troubleshoot any access issues for their employees and provide knowledge-transfer to their network engineering team.

### Realized Benefits with IDA

*As part of the benefit of IDA, it provided the executive leadership a week-by-week status on the journey for enforcing network access control across various hospitals and geographic locations.*

- The readiness reports points out the problem workstations so they can be remediated ahead of deployment.
- IDA speeds up & streamlines the deployment of the network configuration.
- The report shows what is connected to a switch at a given point in time.
- Reports help guide the technical resources in how ready the switch is and where the problems are.
